

Cross-Border AI UX Audit

China → English-speaking global

Self-serve B2B operations teams · AI agent · playbook: english_global

2026-06-14 · v1

01 Executive Summary

Acme Agent has a credible underlying workflow, but its English-market surface over-promises autonomy, under-explains data handling, and has accessibility gaps that will suppress trial conversion among cautious B2B buyers and expose the product on accessibility compliance. The strongest gaps are AI expectation-setting and trust/privacy at the first decision points. With scoped-capability language, a trust panel at the upload step, accessibility fixes, and outcome-specific CTAs, the product can reach trial-ready quality for this corridor.

02 Market Corridor & Evidence

Evidence reviewed: landing page copy, onboarding flow, agent prompt and response, pricing page (captured screenshot)

Not available: full live product, analytics, support tickets

Evidence level: 1-2

Assumptions: Only the pricing page was captured live; other surfaces reviewed as pasted text.

03 Market-Fit Score

56/100

Significant adaptation required before launch

Confidence: medium · Evidence completeness: 58 · Unresolved Critical: 0

Language Naturalness		72
Cultural Fit		68
Trust & Privacy		45
AI Expectation-Setting		40
UX Clarity		64
Accessibility		52

Conversion		58
Agent & Chatbot Behavior		55
Market-Entry Risk		70

Trust/privacy and AI expectation-setting weigh most heavily and score lowest, pulling the weighted total down; accessibility also scores below the bar. No unresolved Critical issues, so no cap is applied; medium confidence reflects partial evidence.

The score is a heuristic summary for comparing iterations of the same product and corridor. It is not a certification, a legal/compliance rating, or a guarantee of market fit. Prioritize the findings over the number.

04 Top Risks

1. Absolute autonomy claim ('handles the entire workflow') mismatches actual agent behavior and erodes buyer trust.
2. Upload step asks for data before explaining storage, training, and retention.
3. Accessibility gaps (contrast, labels) risk excluding users and breach accessibility requirements in regulated markets.

05 Findings by Dimension

EVIDENCE

The AI agent handles the entire workflow for you.

Problem: Implies full autonomy and does not define what the agent decides, drafts, escalates, or what requires human approval.

Why it matters: Cross-border buyers are cautious about delegating decisions to an unfamiliar AI provider; an absolute claim creates an expectation/behavior mismatch and reduces trust.

Recommendation: Replace the absolute claim with scoped-capability language; show the review queue, approval path, fallback, and escalation behavior.

BEFORE

The AI agent handles the entire workflow for you.

AFTER (EN)

The AI agent drafts recommendations, highlights risk areas, and prepares a review queue so your team can approve final copy and market decisions.

Target-market note: Autonomy claims should be tied to accountability, visible control, and an operational fallback path.

Standards: NIST AI RMF: Accountable & Transparent

NIST AI RMF: Explainable & Interpretable

Evidence grounding: landing page copy · confidence: high

HIGH Trust & Privacy

ISSUE-2

EVIDENCE

Let AI optimize everything automatically.

Problem: The upload flow requests content without explaining data use, storage, training, retention, or deletion.

Why it matters: Without a trust signal at the decision point, cautious buyers abandon before uploading, and the AI's value is never demonstrated.

Recommendation: Place a compact trust panel at the upload point covering data use, storage, training policy, retention, deletion, and any review requirements.

BEFORE

Let AI optimize everything automatically.

AFTER (EN)

Your files are processed to generate the review and are not used to train models. Stored encrypted; deleted on request. See data handling.

Target-market note: English-global buyers expect explicit model-training, retention, and provider handling before sharing data.

Standards: [NIST AI RMF: Privacy-Enhanced](#) [ISO 42001: data governance & transparency](#)

Evidence grounding: onboarding flow · confidence: high

MEDIUM Conversion

ISSUE-3

EVIDENCE

Contact us for more information.

Problem: The CTA offers no concrete outcome and adds friction for a self-serve audience.

Why it matters: Vague CTAs depress conversion despite strong traffic; self-serve buyers want a low-risk, concrete next step.

Recommendation: Offer a concrete outcome such as a scoped sample review or a guided trial.

BEFORE

Contact us for more information.

AFTER (EN)

Run a free sample review on one of your own files.

Target-market note: Workflow-first, outcome-led CTAs convert better than AI-first slogans in this corridor.

Standards: [Nielsen #2: Match between system and the real world](#)

Evidence grounding: landing page copy · confidence: medium

EVIDENCE

Our intelligent platform lets you go global instantly with one-click smart automation.

Problem: Buzzword-dense, source-market-style AI copy ('intelligent platform', 'smart automation', 'instantly') reads as machine-translated and immature to the target category.

Why it matters: Broad translated AI-benefit language makes a credible product feel untrustworthy to category-literate buyers.

Recommendation: Name the workflow, input, output, user control, and limitation in target-market-native product language; cut unsupported absolutes.

BEFORE

Our intelligent platform lets you go global instantly with one-click smart automation.

AFTER (EN)

Localize and pressure-test your product copy for a target market, then export a prioritized fix list your team can ship.

Target-market note: Scored with an MQM-style lens: terminology and style errors at major severity, plus an MQM-Chat buzzword/loanword flag.

Standards: MQM: Terminology MQM: Style/awkward MQM-Chat: buzzword/loanword

Evidence grounding: landing page copy · confidence: high

HIGH

Accessibility

ISSUE-5

EVIDENCE

Primary CTA: light-grey text (#9AA0A6) on white; icon-only buttons in the upload toolbar with no text labels.

Problem: Low text contrast and unlabeled icon-only controls fail WCAG 2.1 AA (1.4.3 Contrast, 4.1.2 Name/Role/Value), blocking low-vision and screen-reader users.

Why it matters: Beyond excluding users, accessibility is legally required in several target markets (e.g. EU EN 301 549, US ADA/Section 508); gaps risk complaints, fines, and lost enterprise deals.

Recommendation: Raise text contrast to $\geq 4.5:1$, add visible text labels (or accessible names) to icon-only controls, and run a WCAG 2.1 AA pass with assistive tech.

BEFORE

Primary CTA: light-grey text (#9AA0A6) on white; icon-only buttons in the upload toolbar with no text labels.

AFTER (EN)

Primary CTA: #1A1A1A on white (contrast 16:1); upload buttons labeled 'Upload file', 'Replace', 'Remove'.

Target-market note: For any EU-facing corridor, treat WCAG 2.1 AA as the EN 301 549 / EAA baseline and flag for accessibility-compliance review.

Standards: WCAG 2.1 AA: 1.4.3 Contrast WCAG 2.1 AA: 4.1.2 Name, Role, Value EN 301 549

Evidence grounding: pricing page (captured) (captured: pricing.png) · confidence: high

06 Before / After Rewrites

BEFORE · ISSUE-1

The AI agent handles the entire workflow for you.

Contact us for more information.

AFTER

Run a free sample review on one of your own files.

BEFORE · ISSUE-4

AFTER

Our intelligent platform lets you go global instantly with one-click smart automation.

Localize and pressure-test your product copy for a target market, then export a prioritized fix list your team can ship.

BEFORE · ISSUE-5
Primary CTA: light-grey text (#9AA0A6) on white; icon-only buttons in the upload toolbar with no text labels.

AFTER
Primary CTA: #1A1A1A on white (contrast 16:1); upload buttons labeled 'Upload file', 'Replace', 'Remove'.

07 Priority Backlog

PRIORITY	AREA	IMPACT	TASK	ISSUE
P1	Agent Design	High	Define AI-agent capability boundaries and escalation language across the landing page and onboarding.	ISSUE-1
P1	Trust	High	Add a trust panel at the upload decision point (data use, training, retention, deletion).	ISSUE-2
P1	Compliance	High	Fix WCAG 2.1 AA contrast and add accessible names to icon-only controls.	ISSUE-5
P2	Copy	Medium	Replace generic CTAs with outcome-specific actions across primary pages.	ISSUE-3
P3	Localization	Medium	Rewrite buzzword-dense hero copy into native, workflow-first product language.	ISSUE-4

08 Expert-Review Flags

Privacy / data transfer: Cross-border processing of uploaded customer content and model-provider data handling should be reviewed by a qualified privacy expert before launch.

Accessibility compliance (WCAG / EN 301 549 / ADA): Accessibility gaps may create legal exposure in regulated markets; a qualified accessibility specialist should run a full conformance audit, especially for EU-facing corridors under the European Accessibility Act.

09 Next Steps & Re-Audit Loop

1. Resolve P1 agent-boundary, trust-panel, and accessibility items, then re-audit after copy and onboarding updates.
 2. Send the privacy/data-transfer and accessibility-compliance items to qualified local experts before launch.
 3. Re-run with `compare_audits.py` against this version to track score and finding deltas.
-

10 Limitations

This audit is primarily text-driven; only the pricing page was captured live (Level-2), other surfaces were reviewed as pasted text (Level-1). Full live behavior, analytics, and deeper flows were not available, so behavior-level conclusions are limited. The score is a heuristic summary computed by a deterministic rubric over expert-judged per-dimension scores, not a certification or guarantee. Playbook rules are working hypotheses requiring local validation. Findings are cross-walked to external standards (NIST AI RMF, ISO 42001, MQM, WCAG/EN 301 549) for grounding, not as a compliance opinion. AI-assisted findings require human verification before client delivery.
